

Little Man Computer Command Cheat Sheet

Mnemonic Command	Instruction	Description
INP	Input	Asks the user to input a number for processing.
OUT	Output	Outputs a number from the processor possibly to screen or another device.
STA	Store	Stores a value in the next available memory address.
LDA	Load	Loads a value from the memory and stores it in the accumulator
ADD	Add	Add the value stored in mailbox xx to whatever value is currently on the accumulator
SUB	Subtract	Subtract the value stored in mailbox xx from whatever value is currently on the accumulator (calculator).
HLT	Halt	Stops the processor from processing those instructions.
